- ◆ CHAMPVA/
Veterans' Choice/

Our Clinicians:

Gerry Dybel PT, ScD, GCS: My initial experience focused on treatment of orthopedic and neuro-rehab patients. I have advanced certification in neurodevelopmental treatment of strokes and head injuries. Additionally, I have advanced training in ergonomics and biomechanical analysis in sports training and have been a faculty member in the physical therapy department of a local university since 1992. I have achieved the Geriatric Clinical Specialist certification from the Board of Clinical Specialties of the American Physical Therapy Association. Currently my focus is on the management of orthopaedic and neurological disorders in the senior population.

Connie J. Seymour, PT, PhD, OCS: My clinical background is varied with certifications in treating the neurologically involved client to orthopaedics. I am certified as an Orthopedic Clinical Specialist through the American Physical Therapy Association (APTA). I continue to practice as a generalist but especially enjoy working with neurological, orthopedic, and geriatric clients. I am very involved with the Healthy Elder Living Program (HELP) which is an interdisciplinary program designed to promote health and fitness in older community dwelling adults. Additionally, I am part of a maintenance intervention for neurologically involved individuals from the Greater Merrimack Valley.
